JOURNAL OF COMPUTATIONAL AND APPLIED MATHEMATICS
VOLUME 63, 20 NOVEMBER 1995

Proceedings of the International Symposium on
Mathematical Modelling and Computational Methods
Modelling 94
August 29–September 2, 1994, Prague, Czech Republic

CONTENTS

J. Nedoma
Preface 1

I. Marek
An introduction of Professor Owe Axelsson and Professor Miloš Zlámal 5

INVITED PAPERS

E. Bohl and W. Boos
Binding protein-dependent transporters: an answer of mathematics to biology 11

E. Bohl and I. Marek
A model of amplification 27

J. Jersák
Numerical simulations in quantum field theory of elementary particles 49

T. Kalkreuter
Multigrid methods for propagators in lattice gauge theories 57

P.-A. Raviart and E. Sonnendrücker
Approximate models for the Maxwell equations 69

M. Stynes
Finite volume methods for convection–diffusion problems 83

V. Janovský, S. Shaw, M.K. Warby and J.R. Whiteman
Numerical methods for treating problems of viscoelastic isotropic solid deformation 91

A. Ženíšek and M. Vanmaele
Applicability of the Bramble–Hilbert lemma in interpolation problems of narrow quadrilateral isoparametric finite elements 109

P.D. Panagiotopoulos
Modelling of nonconvex nonsmooth energy problems. Dynamic hemivariational inequalities with impact effects 123

R. Stenberg
On some techniques for approximating boundary conditions in the finite element method 139

O. Axelsson and M. Neytcheva
Scalable algorithms for the solution of Navier's equations of elasticity 149

M. Feistauer, J. Felcman and M. Lukáčová-Medvid'ová
Combined finite element–finite volume solution of compressible flow 179

CONTRIBUTED PAPERS

Z. Dostál
Duality based domain decomposition with proportioning for the solution of free boundary problems 203

T. Regińska
Sideways heat equation and wavelets 209

J. Křížková and P. Vaněk
Domain decomposition like technique with H/h-independent rate of convergence 215

J. Štuller
Ordered modified Gram–Schmidt orthogonalization revised 221

J. Kobza
Computing local parameters of biquartic interpolatory splines 229

H. Lu
Matrix compensation and diagonal compensation 237

G. Carte, J. Dušek and P. Fraunié
Combined spectral-finite difference time discretization for periodic and quasi-periodic flows 245

R. Blaheta and R. Kohut
Solution of large nonlinear systems in elastoplastic incremental analysis 255

V. Kompiš, M. Kaukič and M. Žmindák
Modelling of local effects by hybrid-displacement FE 265

M. Holeček
Model of critical behaviour in elasticity 271

I. Bock
On Van Kárman equations for viscoelastic plates 277

J. Lovíšek
Optimal control in coefficients of boundary value problems with a unilateral inner obstacle 283

T. Scapolla
Avoiding locking in Reissner–Mindlin plates with high-order hierarchic bubble plus finite elements 291

J. Křen
A spatial problem of liquid–shell interaction 301

J. Rosenberg
Variational formulation of the problems of mechanics and its matrix analogy 307

A. Gawęcki and M.S. Kuczma
Elastic-plastic unilateral contact problems for slackened systems 313

A. Gawęcki and B. Janińska
Computer analysis of slackened systems under variable loads 325

S. Koukal and M. Křížek
Curved affine quadratic finite elements 333

J.-F. Maitre and O. Pourquier
About the conditioning of matrices in the *p*-version of the finite element method for second order elliptic problems 341

K. Segeth
Grid adjustment for parabolic systems based on a posteriori error estimates 349

P. Přikryl, V. Cháb and R. Černý
Computational modeling of solid-state reactions in the Ni–Si systems induced by pulsed lasers 357

H. Wern
Finite-element solutions for mechanical drilling methods: A new integral formalism 365

B. Heise
Nonlinear simulation of electromagnetic fields with domain decomposition methods on MIMD parallel computers 373

J. Maryška, M. Rozložník and M. Tůma
Mixed-hybrid finite element approximation of the potential fluid flow problem 383

J. Nedoma
Nonlinear analysis of the generalized thermo-magnetodynamic problem 393

M. Křížek
Numerical experience with the three-body problem 403

J. Nedoma and J. Dvořák
On the FEM solution of a coupled contact–two-phase Stefan problem in thermo-elasticity. Coercive case 411

J. Nedoma and J. Stehlík
Mathematical simulation of osteotomy. Numerical analysis and results 421

M. Bartoš and Z. Kestřánek
Numerical solution of the contact problem. Application to a simple model of the human hip joint 439

Y.A. Chao
Unifying via conformal mapping coarse-mesh neutron diffusion calculations in Cartesian and hexagonal geometries 449

P. Vrba
Modelling of particle beams 457

A. Frolov and S. Řízek
Model of neurocontrol of redundant systems 465

P. Procházka
Optimal eigenstress fields in layered structures 475
